

Empowering customers with a powerful cybersecurity solution.

Delivers comprehensive prevention, detection capabilities at endpoint to prevent zero-day attacks.

The attack landscape has changed, traditional AV type solutions alone no longer offer adequate protection. Why you need AppGuard:

- 1 Proven Success: Guarding millions of endpoints. Customers include: 3 letter agencies in USA and some of the world largest corporations
- 2 Advanced Patented approach: Not reliant on whitelisting, HIPS and sandboxing. Uses patented Zero-Trust Framework; “block and restrain” as opposed to “guess and react”
- 3 Realtime Protection – Blocks all malware actions at kernel level
- 4 Lightweight: Weight less than 1 MB on hard drive and 10 MB memory size
- 5 Simple, quick deployment: Over 95% of policies for single endpoint are already defined
- 6 Cost effective: Eliminates alert fatigue, does not rely on policy update or patching. Lowering labor and operations cost
- 7 Set & Forget: Adapts to software updates and patches
- 8 Independent and Scalable: Not dependent on cloud or hardware, scales to over 500,000 endpoints

“AppGuard should be on every Windows system in the world.”

—Bob Bigman
Former CISO, CIA

Award-winning laptop, desktop, and server protection for enterprises. By applying zero trust principles WITHIN endpoints, AppGuard delivers better protection and lowers cyber operation costs.
